INSTALLATION INSTRUCTIONS

QA1 P/N 52360 Torsion Bar Adjusters

1964-1976 Mopar A-Body, 1962-1972 Mopar B-Body, 1970-1974 Mopar E-body

TOOLS AND SUPPLIES REQUIRED

- Floor Jack
- Jack Stands
- Ratchet & Socket Set

Disassembly Instructions

1. Measure and record the vehicle ride height at the center of the wheel opening. This will help in setting the ride height after installation of the QA1 Torsion Bar Adjusters.
2. Lift and support the vehicle on a solid surface. Support the vehicle by the frame rails allowing the suspension to droop. A vehicle lift is best but careful use of jack stands work well.
3. Remove the front wheels and tires.
4. Remove the tension on the torsion bars by loosening the adjuster bolt in the lower control arms counting the number of turns required to remove the preload. **Count and record the number of turns required to remove the adjuster bolt. This will be helpful later when re-setting ride height.**
5. Remove the torsion bar adjuster bolt and block.

Installation Instructions

1. Insert the new adjuster block and bolt into the control arm. *Note: QA1 recommends the use of Permatex® Anti-Seize Lubricant on the torsion bar adjuster threads.*
2. Tighten the torsion bar adjuster the same number of turns required to remove.
3. Reinstall wheels and tires.
4. Set the car on the ground and check the ride height measurement. Raise and support the vehicle if adjustments are necessary and repeat.

Note: It is a good idea to have the car professionally aligned after making any suspension changes.

READ ALL INSTRUCTIONS CAREFULLY AND THOROUGHLY PRIOR TO STARTING INSTALLATION. PRODUCTS THAT HAVE BEEN INSTALLED ARE NOT ELIGIBLE FOR RETURN. USE THE PROPER JACKING LOCATIONS. DEATH OR SERIOUS INJURY CAN RESULT IF INSTRUCTIONS ARE NOT CORRECTLY FOLLOWED. A GOOD CHASSIS MANUAL, AVAILABLE AT YOUR LOCAL PARTS STORE, MAY ALSO AID IN YOUR INSTALLATION.
