

Part Number Cross Reference

New 2011 Part Numbers

All part numbers have been changed to show that the new range and adjustment mechanism have been incorporated into the shock and, in the case of QA1 adjustable shocks, that they are compatible with QA1's Wireless Remote Adjust System.

- **All Adjustable Shocks Are Remote Ready**

All new and improved QA1 adjustable shocks are compatible with QA1's new Wireless Remote Adjust System. The Wireless Remote Adjust System allows users to adjust their QA1 shocks from inside the car with a wireless handheld controller. Buy the Remote Adjust System now or add it later - your QA1 shocks are ready on your timeline. See pages 8 & 9 for more information.

- **Improved Adjustment Range**

All QA1 drag, street performance and hot rod aluminum shocks have undergone a major design transformation this year. This new design offers an improved operating range that has been optimized to enhance performance by providing a softer ride at the low end of operation, while keeping the high end very stiff for performance handling applications. Each adjustment has been carefully defined to provide the ideal force curve to maximize performance.

- **Improved Adjustment Mechanism**

All QA1 adjustable shocks now feature a positive stop at the end of the adjustment range to guard against over-adjustment. Also, all QA1 adjustable shocks now feature 18 clicks of adjustment per knob, with 324 valving combinations available for double adjustables. In addition, the adjustment mechanism itself has been improved for smoother operation.
